

quality assurance programs with the consumer of animal protein in mind. This issue is a continuing one and demands the utmost scrutiny by the meat animal practitioner. It will not go away and one default by a practitioner will be like a bad apple in a barrel. The veterinarian can be a leader in this program.

It is refreshing to see the changes within the entire veterinary profession that have occurred and are still occurring. There is a more positive attitude found in all phases of practice. Perhaps those days of gloom from the 1970's were the shot-in-the-arm that the profession needed. It is hoped that every veterinarian, regardless of his role within the profession, gives his or her best to keep the profession on the positive side. It's looking better all the time. □

LCI offices move to Madison

The Livestock Conservation Institute has moved their offices to Madison, Wis. The address is: 6414 Copps Ave., #116, Madison, WI 53716; telephone: 608-221-4848.
